Assignment

Exploring Figma: Interface, Layers, Tools, and Collaboration

1. Interface Exploration

I explored the Figma interface including the toolbar, layers panel, design panel, and the main canvas. I also navigated the Home Dashboard to view recent files, team spaces, and the Community section.

2. Organizing Layers, Frames, and Alignme

I created a new design file and practiced organizing elements using layers. I renamed layers, grouped related elements, and placed them inside frames to maintain structure. I also used alignment tools such as left, center, distribute spacing, and vertical/horizontal alignment.

3. Creating Shapes and Using the Text Tool

I experimented with the rectangle, ellipse, polygon, line, and arrow tools to design a simple layout. I used the text tool to add headings and descriptions, and applied formatting such as font size, weight, and spacing.

4. Collaboration in Figma

I practiced collaboration by using the comment tool to leave feedback on elements. I shared the file with a classmate using the Share button and experienced real time editing features.
